Résumé de l'article

Il existe une longue tradition d'études des Monti di Pietà, qui est presque entièrement publiée en italien. Cet article propose une revue historiographique de ces recherches, en se basant sur quatre thèmes centraux les ayant orientées. Le premier de ces thèmes correspond aux relations entre les banques et les premiers Monti, et à la question de savoir s'ils étaient de véritables banques ou des institutions charitables. Le deuxième thème correspond au contexte de ces pratiques formé par les débats théologiques et les opinions juridiques de la fin du Moyen Âge et de la Renaissance. Le troisième thème est centré sur l'influence des prédicateurs franciscains, incluant comment leurs discours antisémites ont été contrebalancés par les préoccupations économiques locales, pour former un compromis pratique. Le quatrième thème correspond au rôle et à la fonction qu'ont joués les Monti dans le Royaume de Naples. En conclusion, cette revue examine les recherches sur les Monti publiées en anglais depuis les années 1930.

Il existe une longue tradition d'études des Monti di Pietà, qui est presque entièrement publiée en italien. Cet article propose une revue historiographique de ces recherches, en se basant sur quatre thèmes centraux les ayant orientées. Le premier de ces thèmes correspond aux relations entre les banques et les premiers Monti, et à la question de savoir s'ils étaient de véritables banques ou des institutions charitables. Le deuxième thème correspond au contexte de ces pratiques formé par les débats théologiques et les opinions juridiques de la fin du Moyen Âge et de la Renaissance. Le troisième thème est centré sur l'influence des prédicateurs franciscains, incluant comment leurs discours antisémites ont été contrebalancés par les préoccupations économiques locales, pour former un compromis pratique. En conclusion, cette revue examine les recherches sur les Monti publiées en anglais depuis les années 1930.

There is a long tradition of studying Italy's charitable pawn banks, or *monti di pietà*, ahistorically, as either a chapter in the history of local pious institutions, an issue related to late medieval scholastic discussions of usury, or an argument in the debate on the medieval origins of modern banking.² By examining a few principal themes, as these have been developed in both Italian and English language studies, we can see how the *monti* are now emerging as a distinct subject of research fully integrated into larger historiographical trends relating to sources, methodologies, and questions. This review of the literature will trace the background, developments, and current state of research on a few topics related to the Italian *monti*, chiefly:

1. The *monti di pietà* and the banks: questions of origins
2. Theological and legal contexts: ideas and sources

3. Franciscans, Jews, and local dynamics
4. The *monti di pietà* and the Kingdom of Naples
5. Studies in English

1. The *monti di pietà* and the banks: questions of origins

Local histories of the *monti* have long been obsessed with the search for primacy, and this has generated many “myths of origins.”³ Current research holds that Umbria and the Marches were the most fertile terrain for the foundation of the first *monti*.⁴ Many early studies identified Perugia as the first in 1462, and the arguments for this identification remain strong, in part because Pope Innocent VIII later held it up as the model to follow.⁵ Some scholars have argued that the first identifiable monte emerged four years earlier in Ascoli Piceno in 1458 as the work of the Franciscan Observant Friar Domenico da Leonessa, though the documentation in support of this is weak.⁶ Since a fire in 1535 destroyed the communal archives of Ascoli Piceno, including the greater part of the documents relative to the monte di pietà, the historian Giacinto Pagnani reconstructed its founding events by using the 1468 statutes of the monte at Recanati, also founded by Fra Domenico da Leonessa, which are extant.⁷

Civic statutes regulated many corporate groups such as confraternities, guilds, and *monti di pietà*.⁸ Civic, confraternal, and monte statutes sometimes give valuable lists of rules governing various aspects of the activities of the monte, including the duration of loans, maximum amounts, the value and type of acceptable pawned articles, the number of contracts necessary, the duties of officials, and the means of raising capital. The statutes for various *monti di pietà* represent a particularly important source for dating and reconstructing their activities, and this is why we often find them published in appendices to articles and volumes.

At the same time, statutes are limited in that they fail to offer any specific explanation of the later history of local *monti di pietà*. Pagnani’s use of the monte in Recanati is revealing. Bernardino Ghetti had investigated it as early as 1907, and scholars since have taken it as the model of a monte. Yet when aiming to explain its closing in 1507, Ghetti mentioned only rather vaguely that there had been some interference on the part of the commune.⁹ It is clear that the real aim of many of the studies of the first *monti di pietà* in Umbria

and the Marches was not so much to describe and understand the development of the institution as it was to search for the “ideal type” of monte that could serve as a model for others to copy. With few exceptions, only in recent years have scholars moved beyond studies focused mainly on exploring origins and establishing that “their” monte was in some way the first one or in some other way distinctive.¹⁰

The geographical, chronological, and analytical limits of many studies can be explained in part by the fact that local banks and bank foundations have been among the main sources of funding for research and publication into Renaissance monti. Thanks to their resources and ready access to documents, they have underwritten the research projects, conferences, and publications that have shaped the field.¹¹ They have also brought their own pre-occupations. The support of banks and their foundations helped foster a particular historiographical school of thought about the monti di pietà that studied their origins and, for much of the twentieth century, aimed to define their nature, asking particularly whether the monti di pietà were charitable institutions or forerunners of modern banks.

The two entries written for the *Enciclopedia Italiana* in the 1930s by Gino Luzzatto and Armando Sapori exemplified the two very different directions that research was taking at the time into the question of whether monti di pietà were fundamentally charitable institutions (Luzzatto) or banks (Sapori).¹² In the 1950s, Giuseppe Mira followed Luzzatto in arguing the former case, since many monti were founded by the Franciscan Observant Friars, an order focused on charity, and much of the initial capital was generated from donations and bequests from private individuals.¹³ Mira limited his analysis to monti such as those of Perugia and Orvieto that relied on volunteer employees and that did not charge for short-term loans.

Armando Sapori, on the other hand, emphasized that monti were precursors of banks. Certainly they arose in order to liberate the poor from debts they had contracted with usurers, and particularly Jewish usurers. Gradually, however, by expanding the activities by which they generated capital and financed works of charity, most monti ended up becoming genuine banking institutions.¹⁴ Writing in the 1960s, Gino Barbieri developed a similar approach, and was unwilling to see the monti simply as “praiseworthy charitable works of a trifling nature within the sphere of the miserably poor.” He argued that the

monti functioned as a force for controlling the cost of money, to the advantage of labour, and for supplying credit for production and commerce.¹⁵ Barbieri here followed John Maynard Keynes, who reevaluated the social advantage of the medieval laws on the prohibition of usury as discouraging excessive interest rates. In reality, there is nothing in the works of medieval theologians or jurists that might even vaguely suggest the Keynesian concept of the “marginal efficiency of capital” or a “preference for liquidity.”¹⁶

The economist Giuseppe Garrani wrote at the same time and in the same vein. Because both the founders of the monti and Keynes approved of lower interest rates, Garrani argued that Keynes could actually be considered “among the late but important defenders of the *monti di pietà*.”¹⁷ For Garrani, in fact, the *monti di pietà* were not charitable institutions at all, given that their founders aimed to offer interest rates lower than those of the usurers, thereby addressing the lack of ordinary credit for the population. Despite his training as an economist, Garrani did not use the accounting sources of the monti but depended solely on their statutes, in the most important cities of Italy, to set up a comparison among their regulations. Garrani’s book received mixed reviews, with one historian arguing that he had misunderstood “the animating spirit of the institution,” which was always and uniquely a spirit of doing good, even while operating like a bank.¹⁸

Some of these questions have been worked out in relation to the monti of Tuscany, which generally have not received as much attention as one would expect. The Monte di Pietà of Pistoia, founded in 1473, was the first in the region, but the first major study of it was not published until 1976 in conjunction with its quincentenary. Supported by the local Cassa di Risparmio, this history was written with the deliberate intent of connecting with David Herlihy’s previous study of early medieval Pistoia.¹⁹ Authors Ilvo Capecchi and Lucia Gai made use of the various redactions of the statutes of the monte, published in an appendix to their volume, and consulted the deliberations of city councils and commissions charged with “reforming” the monte rules. While aiming for completeness, they made little use of private documents such as the 1491 register for the sale of its pawned items (which they did however publish in an appendix), and they failed to mention the extant 1553 ledger of the monte’s creditors and debtors. Attentive examination of those documents would have allowed Capecchi and Gai to consider individual clients, but these documents did not fit into the restricted time span they were considering. Moreover, such

documents would have been of little help in supporting one of the stated goals of their research, which was to establish “a continuity between those institutions of the past and today’s banks, with particular reference to the Casse di Risparmio and the *monti di pietà*.”²⁰

The argument that the *monti di pietà* were primarily like banks has been picked up recently by Tommaso Fanfani, though it otherwise finds little favour today. Approaches that emphasize either the charitable or banking character of the *monti di pietà* are now considered outmoded, as most historians see *monti* as having been organically and inseparably both of those things.²¹

The rise of confraternity studies aids in this new approach, since it sets the emergence and development of *monti* into an institutional context that thoroughly blends religious motivations with lay social and economic realities. In fact, across Italy confraternities provided the most common organizational form for new *monti* from the fifteenth into the eighteenth centuries.²²

2. Theological and legal contexts: ideas and sources

Garrani published his book in 1957, the same year that John Thomas Noonan Jr. published *The Scholastic Analysis of Usury*. Noonan considered the *monti di pietà* as charitable institutions and defined them as “a public pawnshop, regularly financed by charitable donations and run not for profit but for the service of the poor.” In order to reconstruct the rise of the *monti*, he referred to the works of such theologians and canonists as Niccolò Bariani, Bernardino de Busti, and, above all, Tommaso de Vio, known as Cardinal Cajetan, who discussed the possibility of asking for “a small fee for [the monte’s] care of the pawns and for administrative expenses.” Noonan was convinced that the *monti di pietà* represented “a momentous break from the past.”²³ That the *monti di pietà* were a novelty in medieval Italy was already apparent from the words of Bernardino da Feltre and Marco da Montegallo, and from the *consilia* of Giovanni Battista Caccialupi and Gomezio of Lisbon.²⁴ While Noonan’s book was positively received in the United States, Italian historians believed that the medieval usury prohibition was by no means an indisputable and inflexible rule, but rather that medieval society accepted a logic of profit, with the *monti di pietà* providing a prime example.²⁵

More recently, Maria Giuseppina Muzzarelli has reexamined the disputes that animated the last decades of the fifteenth century, when the *monti* first emerged. Gino Barbieri reviewed the debates among scholastics, but events were shaped more profoundly by the preaching of Franciscan Observants like Bernardino da Feltre.²⁶ One can compare Bariani and Cardinal Cajetan on some of the key technical points concerning the *monti* (for instance, the presumed illicit nature of asking for interest on capital lent), but there were some deeper distinctions that divided them. In his defense of free loans, Bariani characterized the relationship between the employees of the *monti* and the clients who needed a loan as individual and voluntary. Cajetan, on the other hand, thought that clients of the *monti* should contribute to the expenses connected with making loans and with employing competent professional functionaries rather than volunteers. These were two related aspects of making loans that had no connection with the size or the duration of the loans. According to Muzzarelli, Cardinal Cajetan moved beyond generic models of charity because he was convinced that the *monte's* purpose of promoting social solidarity had to be governed through rational organization.²⁷

The juridical contexts for the *monti* were as significant as the theological ones, and recent studies on legal consulting have stressed the value of legal opinions (*consilia*) as a rich and privileged source for the study of social institutions like *monti di pietà*.²⁸ Late medieval and Renaissance jurists like Fortunato Coppoli, Benedetto Capra, and Giovanni Battista Caccialupi produced many *consilia* in defense of the *monti* that amplified the preachers' ideas regarding the *monti di pietà*.²⁹ In particular, Annius of Viterbo defined the intended beneficiaries as *pauperes pinguiore*s — that is, those who were not destitute but who periodically (e.g., during feast days) lacked sufficient food and could not provide for their home and family. This was a large segment of the population that the *monti di pietà* served well.³⁰ The *pauperes pinguiore*s were distinct from the miserably poor and destitute, who could turn to other charitable institutions like confraternities, hospitals, convents and monasteries, and other pious initiatives. It was not by chance that the *pauperes pinguiore*s were asked to guarantee their loans with pawns, as a sign that they were not vagabonds. It was clear that the clients of the *monte* could be indigent but were expected not to be so desperate as to solicit alms.³¹

It is not the private documents of the *monte* that permit us to discern what types of people were clients, but rather the account books. These can give

direct knowledge of the economic situation faced by commercial agencies, families, communes, and even pious foundations.³² Monte statutes typically stipulated that they must keep several registers: the Pistoia monte, for example, was obliged to keep up more than five of them. These included both elementary or preparatory accounting registers (*quaderno di cassa*) and also more complex or definitive ones (*libro mastro* and *libro giornale*). Studying these registers requires special technical knowledge, and this led some historians in the past to ignore them.³³

Fortunately this situation has changed and modern historians work extensively with the registers and even publish editions of them. In a recent essay collection on account books, eleven authors systematically investigated accounting techniques used in the major Italian monti, noting that the obligation dictated by their statutes to retain their accounting registers was not always observed, so that many such books have been lost.³⁴ The extant registers show great complexity: most monti officials (with the notable exception of the Tuscans) used double-entry bookkeeping. The purpose of accounting within the monti was different from that of mercantile operations: merchants wanted to track variations in assets while monte officials aimed to maintain a balance between income and expenditures in order to assure stability and continuity.³⁵ This gave particular responsibility both to the person responsible for keeping money lent to the monte and to the *massaro* who kept the pawn items and who verified that clients were not destitute but were legitimate *pauperes pinguiores*. In this context it makes little sense to debate whether the monti were charitable institutions or banks. The monti emerged to charitably provide credit to the *pauperes pinguiores* but according to rational banking procedures.

3. Franciscans, Jews, and local dynamics

The German historian Herbert Holzzapfel wrote a pioneering study in 1903 which presented the monti di pietà as particularly Franciscan institutions and a concrete example of the Franciscans' compassion for the weakest classes of society. Many later historians picked up on this theme and presented the monti as central to a Franciscan Observant strategy of limiting recourse to Jewish moneylenders.³⁶ Some have emphasized that this element was strongest for the founders of the first *monti* in north-central Italy, and that Franciscan

Observant preaching, which frequently included strongly anti-Semitic themes, was indeed vital for the foundation of the *monti di pietà*. Yet it is equally clear that local *monti* were shaped by local dynamics, and that these often moderated exclusionary prejudices and changed institutions after a few decades.³⁷

Giacomo Todeschini recently argued that Franciscan theologians introduced the principle that interest was licit when it served the public interest (*utilitas publica*), and that this constituted a concept of both the economic and the moral productivity of wealth that the *monti di pietà* translated to a practical plane.³⁸ The *monti di pietà* were a result of the distinct moral theology of the Franciscan Order, which departed from the traditional positions of medieval Scholasticism on usury. Yet on examining the historical context in which it developed, one finds that Franciscan moral theology seems to have been somewhat less innovative and more consistent with mainstream teachings.³⁹ Giovanni Ceccarelli has connected the principal Scholastic statements on the economy to the history of medieval thought, and finds that the *monti di pietà* are in the most direct practical tradition. A number of other historians have followed the same theme, arguing that in spite of sharp differences on points of detail or of practical application, medieval Scholastics were fundamentally in agreement concerning methods and principles in the treatment of economic themes.⁴⁰

It is commonly believed that the Franciscan Observants preached the institution of the *monti di pietà* because they were more attentive to the needs of the unfortunate than the Dominicans and the Augustinians, who were more inclined to philosophical speculation. Yet the facts do not always support this. Dominican friars Annius of Viterbo and Girolamo Savonarola were two high profile supporters of *monti* within the Dominican Order, and the latter was a founder of Florence's *monte* in 1496. In southern Italy, where *monti di pietà* were founded from the early sixteenth century, the impetus came largely from merchants, nobles, and members of confraternities.

Regardless of where they were founded or by whom, most *monti* followed the operational patterns set by private banks, both Christian and Jewish. Jews were particularly active in the small and middling cities of Italy, where no major banks operated, and where from the latter half of the thirteenth century civic authorities signed agreements (*condotte*) with Jewish moneylenders allowing the latter to offer credit under certain conditions.⁴¹ Historians have noted that these agreements could move beyond simple loans, and that by controlling the

credit market, Jewish lenders could influence civic economic policy.⁴² In some of these cities charitable monti co-existed with Jewish lending, which though more expensive served those who were not *pauperes pinguiore*. While it might seem contradictory that Jewish banks and Christian monti di pietà could co-exist and compete with one another, the monti di pietà's promoters, and chiefly Franciscan Observant preachers, argued that charitable pawn banks existed to break the hold of Jewish lenders on the poorest and most indebted segments of the population.

Recent scholarship re-evaluates Christian-Jewish relations in urban areas.⁴³ A *consilium* of the jurist Paolo di Castro (d. 1441), while emphasizing the need to regulate such activities with strict *condotte*, supported the lending activity of Jewish bankers as *necessarius et salutifer* in a society that needed monetary liquidity.⁴⁴ A study of the Franciscan Observant Bernardino da Feltre, notorious for powerfully anti-Semitic sermons delivered across north and central Italy, suggests that this anti-Jewish element was not in fact the most dominant element in his preaching.⁴⁵ While many preachers called for Jewish moneylenders to be eliminated, local authorities were often reluctant to lose a source of ready capital.

The commune of Rieti provides an example of the kind of tense co-existence that resulted. Beginning in the late fourteenth century, Rieti welcomed Jewish moneylenders and negotiated a *condotta* with the unusually long duration of 32 years. Through the fifteenth century, communal regulations grew more stringent as the commune sought to control lending activity. A first attempt to establish a monte di pietà in 1473 failed, but in 1489 the preachers Bernardino da Feltre and Andrea da Faenza founded a monte di pietà and a monte frumentario. While one study of the statutes of the grain monte suggested that the Jewish moneylenders were operating in clear opposition to the civic authorities, Anna Esposito's study of council debates and decisions shows that authorities in Rieti consciously maintained both the older Jewish and newer Christian forms of credit.⁴⁶ Jewish lenders met all requests, including those of the communal authorities, albeit at a higher rate of interest, while the monte assisted only the working poor who periodically ran short of ready funds.

Other recent comparative studies confirm this co-existence of Jewish and Christian banking. Credit relations between Christian and Jewish lenders were complex, and to simplify the relation risks exaggerating some aspects of it. In the Marche, the monti had little initial capital and loaned money without

interest to a select group of borrowers, with the result that they could never substitute fully for the Jewish moneylenders.⁴⁷ In Liguria, one of the oldest *monti di pietà*, founded in Genoa in 1483, was not promoted by ecclesiastical authorities to eliminate the Jewish banks, but was a joint initiative of such civic institutions as the Banco di San Giorgio, the Office of the Misericordia, and the Pammatone Hospital to assist the working poor.⁴⁸ Daniele Montanari's recent collection of essays on *monti* and Jewish lenders in different parts of Italy shows this to be a recurring pattern; the contributors consider the parallel diffusion and comparative operations of *monti di pietà* and Jewish banks, and highlight the local political factors that led the civic authorities to seek the continuation of both forms of credit.⁴⁹

The situation in Lucca, where Jewish moneylenders had operated from the early fifteenth century, was more complicated. Nicholas V authorized their activity with the bull *Quamvis reprobanda* of 1452, whose authority was contested by Bernardino da Feltre among others.⁵⁰ Maria Giuseppina Muzzarelli has noted that while Lucchese citizens petitioned for the bull in order to recognize the presence of Jewish moneylenders, in fact it contributed to their leaving the city in 1493 when they no longer found security there. *Quamvis reprobanda* reflected the broader debate within Lucca regarding provision of credit, a debate that extended beyond Jewish moneylenders or *monti di pietà* and resonated in regulations passed by the city's General Council regarding the second *monte di pietà* (1493–1503).⁵¹

4. *Monti di pietà* and the Kingdom of Naples

Discussion of the *monti di pietà* in southern Italy was long confined to general works on the Kingdom of Naples.⁵² Giambattista Gifuni's attempt in 1801 to trace the development of the Kingdom's *monti* from documents inspired no followers.⁵³ General works that considered the *monti di pietà* within the model of the charitable institutions dedicated to aiding the poor noted that as early as the latter half of the sixteenth century, those institutions paid careful attention to the financial and credit markets. The *monti* were considered variations on the public banks, which spread rapidly in southern Italy in the later Middle Ages, and on the use of certificates known as *fedi di credito*.⁵⁴ Between the fifteenth and sixteenth centuries, congregations of laymen in southern Italy ran

hospitals, confraternities, and monti di pietà, and the Viceroy recognized the important work they did in collecting savings and distributing credit by giving them the title of “public banks.”

The term “public” was not intended to distinguish between public and private banks, but rather referred to the *fede pubblica* — that is, to the sort of service they offered. Because it was carried out in favour of city-dwellers, it should be regulated in the public interest. Authorities set up substantial formal requirements that had to be met before a bank could be opened, the first of which was adequate real and personal guarantees. A decisive step in the development of the monti di pietà in the Kingdom of Naples was the concession of a privilege that permitted the state to accept the *fedi di credito* provided by the monti as a receipt that could be redeemed by third parties for cash. This essentially recognized the paper receipts of the monte as legal currency.

It was once commonly thought that demands for high rates of interest by Jewish moneylenders in southern Italy triggered the founding of local monti di pietà, but this was not in fact the case.⁵⁵ Jewish moneylenders multiplied in number in the fifteenth and sixteenth centuries, thanks in large part to their expulsion from the Iberian Peninsula and migration to the Kingdom of Naples after 1492. Yet most of their loans were extended to agrarian producers, and they participated very little in public finance.⁵⁶ Riccardo Filangieri published the first monograph on the monti di pietà in Naples in 1940; Raymond De Roover dismissed it as “an amateurish, but beautifully illustrated volume.” De Roover himself focused on the *fedi di credito*, which he thought were not a prototype of banknotes but rather a form of deposit certificate that only gradually came into general circulation.⁵⁷

Studies written in recent decades have emphasized the monti di pietà as public banks and have further discussed the *fedi di credito*.⁵⁸ Paola Avallone has been particularly active with a series of detailed studies. She sees the monti in southern Italy reflecting models established in central Italy, and agrees with Muzzarelli that the *pauperes pinguiores* were the typical users of the southern monti. Avallone notes that free pawning was common with that clientele because most of the monti of southern Italy were founded with capital from confraternities and other charitable institutions, and that only later were these funds expanded with donations and offerings. The greatest difference between the southern monti and those of the rest of the Italian Peninsula was juridical:

the southern *monti* gradually freed themselves of all ecclesiastical supervision, requesting recognition — *regio assenso* — only of the court in Naples.⁵⁹

Avallone and Angela Sinisi have both produced surveys of the *monti* in southern Italy, relying on detailed maps and graphs to show the areas of the Kingdom of Naples where the better-known *monti* were located.⁶⁰ The oldest *monte di pietà* in southern Italy was founded in Lecce in 1520. Puglia was one of the regions with the greatest number of *monti*, yet like many other southern Italian cities and regions, and unlike Naples itself, it does not have more than a small number of studies dedicated to individual *monti*.⁶¹ Bari stands out, in part because the archival records include two rare account books, although the local history unfortunately does little with them.⁶² This is common among most historians of the *monti di pietà* of southern Italy, who are usually local historians intent on uncovering the origins and local characteristics of their institutions, such as their relationship with confraternities and hospitals. This common connection between *monti* and charitable institutions was once thought to be a unique characteristic of southern Italy. In fact, recent studies of central and northern Italy have shown similar close connections between the *monti* and charitable operations in Brescia, Crema, and Cremona.⁶³

5. Studies in English

Until recently, there have been few studies of *monti di pietà* in English, and even standard business histories included little or nothing about them.⁶⁴ English language essays on particular *monti* or themes such as credit facilities for the poor have appeared in recent international collections, and this can help those who are interested in the question both for major centres such as Naples, Florence, Bologna, or Venice, and less-studied places such as Avignon, Malta, Istria and Dalmatia, and even Ottoman Turkey.⁶⁵ These essays explain the popularity of the institution of the *monti di pietà* even in areas not considered part of the mainstream in studies of the pawn banks.

The first influential study in English appeared in an article by Abbot P. Usher in 1934. Usher considered the *monti* of Naples to be genuine banks that, as an outgrowth of confraternities and hospitals, maintained names and functions different from those of the original institutions.⁶⁶ His death in 1965 prevented Usher from completing his studies on the banking system of southern Italy and

developing his reflections on public banking there. Raymond De Roover briefly took up these references, combining them with a reading of Filangieri and with the reconstruction of the Venetian Pisani, Lippomano, Garzone, and Agostini banks (1499–1500) and of the Pisani-Tiepolo bank (1584). Frederic C. Lane dealt with them indirectly in reference to the founding of a public bank on the part of the Venetian government, the Banco della Piazza di Rialto (1587).⁶⁷ He neglected to define what a “public bank” was, though De Roover expanded on the point and noted that the public banks were founded after “the disappearance of the private banks . . . under the auspices of charitable foundations, such as [the] *monte di pietà*, the foundling hospital, the hospice for incurables, etc.” It was those banks that furnished capital to the *monti di pietà*, which specialized in “pawnbroking, that is in making small loans, secured by pledges, to the needy.”⁶⁸ Even in his late works, De Roover insisted on the public nature of the *monti di pietà*, defining them as “public pawnshops, which charged just enough interest to cover operating costs” and as “credit rather than profit-making institutions, which advanced small sums to people of modest means.”⁶⁹ For De Roover, the foundation of the *monti di pietà* represented a more constructive approach to the medieval usury prohibition than did the theoretical constructions of the casuists: the *monti* distributed credit at modest interest rates, making loans possible without contradicting the usury prohibition.⁷⁰

De Roover was less positive about the experience of the *monti* than other scholars. He probably was thinking of the failure of the *monti* in Flanders, when Archduke Albert VII of Austria and Archduchess Isabella decided to substitute deposit banks for the private banks. As De Roover states, “the capital of the ‘*monts-de-piété*’ was soon depleted by mismanagement, forced government loans, and outright dishonesty.”⁷¹ Subsequent studies have thrown new light on the Flemish *monts-de-piété*. Myriam Greilsammer assigns a decisive role to the Jesuits and to the theologian Leonardus Lessius, as Todeschini had done with the Franciscan theologians, while Herman van der Wee demonstrates that the archducal couple, Albert and Isabella, wanted to put into effect a centrist policy that would end the monopoly of the credit market by the private banks, using the Italian *monti di pietà* as their explicit model.⁷²

Brian S. Pullan devoted one-third of his 1970 *Rich and Poor in Renaissance Venice* to the *monti di pietà*. Aware of the failures of the private banks of Venice, he concluded that the *monti di pietà* of the Veneto were equivalent in some ways to the public banks of southern Italy even though they operated

essentially as charitable institutions.⁷³ Venice itself never established a monte di pietà, preferring to force Jewish moneylenders to lend at low rates to the poor, so Pullan focused his research on the diffusion of the monti in the Venetian *terraferma*. Reinhold C. Muller's lengthy review synthesized Pullan's ideas, noting that while they were supposedly intended to replace Jewish banks they in fact co-existed with them.⁷⁴ Mueller cited the wry comment of a French traveller to Venice of the latter sixteenth century: "Je crois qu'il n'y a qu'à Venise où le *Mont-de-Piété* s'exerce par les Juifs" ("I think that nowhere but in Venice is the *Monte di Pietà* run by the Jews").⁷⁵

According to Paola Lanaro, Pullan provided an able description of the development of the monti from centres of distribution to centres of collection in the Veneto and showed how the sixteenth-century monte di pietà ended up serving functions quite different from those for which they had been conceived.⁷⁶ Pullan later reconsidered some of his findings, but still stressed the public and charitable character of the monti. He also recognized that often bureaucratic procedures for selecting among the pauperes pinguiores worked to the advantage of the Jewish moneylenders, who were less fastidious, and that this in part invalidated the original inspiration of the monti.⁷⁷

The Florentine monte di pietà has been studied, for the most part, by English-speaking scholars.⁷⁸ One of the first studies was by Frank R. Salter, who explained the emergence of the Florentine monte as a reaction, directed by Savonarola, against the Jewish banks and their supporters, the Medici. Some historians have argued instead that Savonarola was guided more by a desire to suppress private banks than by his opposition to Jews or usury.⁷⁹ Carol Bresnahan Menning has published several noteworthy studies on Florence's monte di pietà, dealing with it less in the context of anti-Semitism or religious reform than that of state development. Her first study describes the change in the nature of the institution as it gradually became the bank of Grand Duke Cosimo I de' Medici, who made use of loans granted by the monte to reward his supporters and consolidate his own personal power.⁸⁰ In another study, Bresnahan Menning turns to the early decades of the Florence monte di pietà and shows that it was financed not by the *populo minuto*, as had previously been thought, but by the large sums deposited by local patricians.⁸¹ Bresnahan Menning stresses that as early as the first decades of the sixteenth century the monte abandoned its initiatives in support of the poor.⁸² The crucial figure here was the first Duke of Florence, Alessandro de' Medici, who, in order to save the

monte from bankruptcy, permitted it to double its interest rates on loans from 5 percent to 10 percent in the early 1530s. Poorer clients, who were already burdened with higher taxes, suffered, but the monte was transformed from being an institution that distributed loans to the disadvantaged to one that took in deposits from the advantaged. The very stability of the monte attracted a broader clientele eager to deposit its savings.⁸³

While Bresnahan Menning focused on political and financial events connected with the Medici dynasty in the sixteenth century, Richard Goldthwaite has surveyed banking activities of the Florentine monte throughout the Renaissance. Like De Roover, Goldthwaite sees the monte as “a pawn and public deposit bank” and emphasizes that what made the monti distinctive was the closer public and moral control exercised over their activities by the authorities. Its most telling characteristic was its transformation into “a public bank,” and even into “a genuine savings-and-loan bank.” The monte belonged among secondary-level banking institutions like those of the merchant-bankers, the private bank of the Ricci family, and even the charitable institutions of southern Italy.⁸⁴ He found that as the anti-Semitic preaching of the Franciscan Observants moderated in the sixteenth century, the monti ending up imitating the Jewish banks that they claimed to replace. Their broader banking activities gradually differentiated them from other charitable institutions. Goldthwaite follows Noonan, albeit indirectly, in arguing that by recognizing the monti di pietà, city governments implicitly circumvented the prohibition of usury.⁸⁵ In fact, the Florentine synod of 1574 tightened anti-usury legislation, setting off polemics over the legality of the operations carried on up to that point by the monte. These polemics continued into the seventeenth century and risked diminishing the monte’s ability to attract capital.⁸⁶

The monti di pietà of Umbria have been studied by Ariel Toaff, who connects their foundation to anti-Semitic preaching and propaganda of the Franciscan Observants.⁸⁷ Here again, city governments responded not by banning Jewish moneylending, but by engineering co-existence. Toaff shows that the Jewish moneylenders of the principal cities of Umbria continued to carry on their activities even after the rise of the monti di pietà, and that in fact Jewish moneylenders even contributed to the financing of many monti. Following Noonan, Toaff considers usury “a necessary, and perhaps inevitable evil, in spite of its moral and legal condemnation.”⁸⁸ This meant that communal and religious authorities could easily concoct various compromises between the

rigidity of Franciscan preaching and the need for the credit provided by Jewish moneylenders. For Toaff, this made it possible to save appearances and forms and led to a weakening of the centuries-old medieval usury prohibition.⁸⁹

The impact of the usury prohibition has also been studied by Elaine S. Tan who stresses the public and charitable character of the *monti di pietà*. Tan believes that the origins of the *monti* should be sought in the growing poverty of the fifteenth century and in the consequences of centuries-long controversies regarding interest-bearing loans. These controversies prompted the scholastics to think twice about the medieval laws prohibiting usury and to conclude that the request for a modest interest rate on the part of the *monti* was preferable to directly protecting the poor from the usurers' charges.⁹⁰

6. Conclusion

Modern studies of the *monti di pietà* have come a long way. They emerged from studies of usury, banking, charity, and anti-Semitism, and in some cases failed to move far beyond parochial questions about founding date and local peculiarities. Their fifteenth- and sixteenth-century history is now far better known, and monographs, conferences, and essay collections have allowed scholarship to move forward into comparative analysis and synthesis both in Italian and English language scholarship. Modern scholars now explain the *monti* as being a hybrid of charitable institution and bank from the very beginning, and as fundamentally shaped by local dynamics that often ignored abstract theological statements and anti-Semitic propaganda. The seventeenth century remains less well known, although in the last two decades historians have begun analyzing the changes in economic and financial options, the continuation of charitable impulses, and the shifting relationship between the *monti* and the administrative policies of the urban elites who governed them.⁹¹ This collection demonstrates how historians are making more use of ledgers and notarial records in order to understand how lenders and borrowers used the *monte*: how they circumvented rules, what goods they pawned, and how they related to Jewish moneylenders. Through this kind of interdisciplinary research into archival sources, modern scholarship is offering a more fully rounded picture of the economy of makeshifts through which Renaissance and

early modern Italians negotiated debt and developed the financial tools for the expansion of a commercial society.
