Giovanni Aloï

Why Look at Plants? The Botanical Emergence in Contemporary Art

In 2006–2007 Giovanni Aloï launched the online journal *Antennae: The Journal of Nature and Visual Culture*, dedicated to multidisciplinary investigations, notably on the connections between art and the non-human. This, as well as his first book, *Art & Animals* (2011) provides a backdrop for the work under review here. *Why Look at Plants*, winner of the 2019 Choice Outstanding Academic Title, is a deep dive into the arts and that broad, unruly swath of non-human life, the plant world. Aloï sets out his methodological path in a brief preface, followed by his major introductory essay that begins with his childhood memories of plant/human connections. In the second part of this essay, “Plants and Animals: Issues of Representation,” Aloï considers the inescapable roles that cognitive, cultural, and physical contexts play in our understanding of the non-human. As he notes, “every encounter with others, nonhumans, objects, particles is utterly defined by the materiality, modality, structure, and histories of the epistemic spatializations in which the encounter takes place.” Acknowledging a debt to Foucault’s notion of “epistemic spatialization,” Aloï evokes the arts as a tool for overcoming “plant blindness,” our anthropocentric mental preconditioning that hinders our awareness of the plant world. This discussion culminates in a careful elaboration of the notion of spatializations, that, as he summarizes elsewhere in the book, “culturally and economically inscribe the blueprints of biopower relationships between humans and plants.” This concept sets the stage for the body of the text that unfolds in eight spatially conceived parts (comprising thirty-five chapters), titled: *Forest, Trees, Garden, Greenhouse, Store, House, Laboratory*, and *of Other Spaces*. Each of these commences with an introductory essay by Aloï, followed by essays by an international roster of contributors, including artists, writers, theorists, curators, and academics.

These contributions cover an immense range of approaches and themes. They include, to take only a few examples, Natasha Myers’ revisionary experiencing of trees in an urban public park through a kinesthetic awareness; Lucy Davis’ multi-faceted socio-cultural inquiry into an eighty-year-old bed made of teak; Laurie Palmer’s consideration of lichens and their unwillingness to grow under human controlled environments; Linda Tegg’s meditation on supermarkets and the disconnects between the commodified plant world and the world of humans; the fascinating transcription of a thread from an online discussion forum on the subject of Home Depot’s disposal of plants; Monika Bakke’s projections of, “new plant-machine hybrid systems”; Andrew Yang’s provocative look at some evolutionary contingencies; Aloï’s interviews with Mark Dion about the artist’s important portfolio, *Herbarium Perrine*; and Aloï’s discussion with Mat Collishaw about the latter’s explorations of artificiality and decay, a contemporary re-thinking of Victorian aesthetics. In sum, *Why Look at Plants?* is essential reading for anyone interested in the role of the arts in considering human/non-human interactions, plant blindness, posthumanist thought, or the myriad implications of the Anthropocene.
